

Educational Opportunities For Enhanced Employability

FBLA helped me prepare for a career in software engineering through enriching and engaging activities, competitions, and experiences. I am honored to be part of the FBLA National Electronic Career Portfolio competition. FBLA has not only provided me with the opportunity to sharpen my skills and grow as a young professional, but it has also prepared me for the real-world job market.

I developed my leadership skills through attending the 2019 PA FBLA State Leadership Conference and also the National Fall Leadership Conference in Washington DC.

At these conferences, I attended various leadership workshops, actively participated in the group discussions, and obtained valuable feedback from my peers.

These leadership skills have already assisted me with obtaining leadership roles within my school and they will assist me in my future career as a software engineer as I will oversee projects and work as a productive part of a team.

My leadership training was invaluable during my internship at AgWorks in that I was the team leader and as such I led the team to success. The business knowledge that I obtained within FBLA can help me throughout my career. This is because I have learned very important aspects of business such as soft skills which are of the utmost importance within the workplace as well as in all personal business dealings. These skills will surely benefit me to excel in my future career.

Scholarships

FBLA helped me to obtain various scholarships including an FBLA scholarship as well as the \$25,000 National Honor Society and \$40,000 Amazon scholarship.

FBLA played an integral role in that it was my FBLA leadership training and soft skills that assisted with conveying my goals and ambitions professionally in a manner that achieved the goal of winning the scholarships.
